- Independently tested and proven
- Non-toxic, non-caustic, no harsh chemicals
- Meets Australian TGA disinfectant standards

**Hand hygiene is the most important way of preventing
the spread of germs, bacteria and sickness.**

ANYTIME, ANYWHERE:

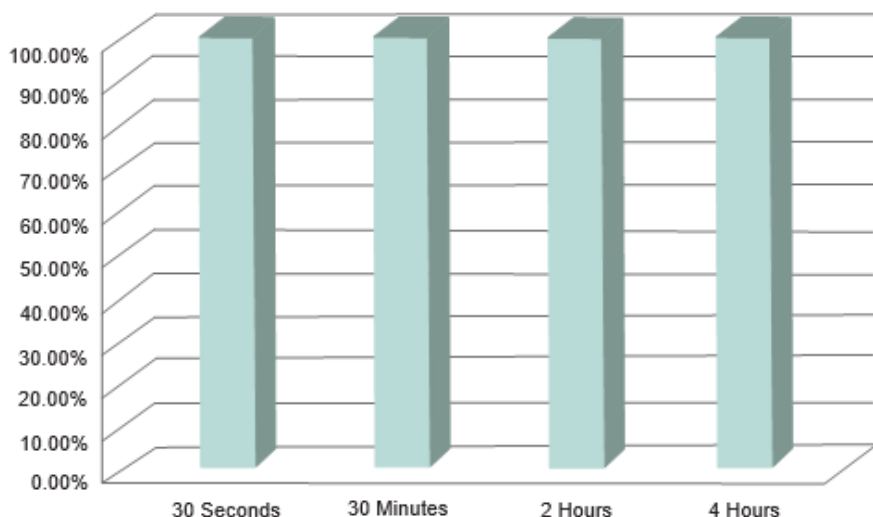

Huxter's Alcohol Free Hand Sanitiser is a safe, simple and effective way to sanitise your hands without the need for soap or water.

Being alcohol free it can be used repeatedly without drying the skin and with its natural emollients, providing a moisturising effect. It can be used in environments where the use of alcohol is either banned or discouraged including religious centres, educational facilities and medical & health facilities.

HOW IT WORKS:

Huxter's sanitiser contains N-alkyl ethylbenzyl dimethyl ammonium (C12-C14) also known as quaternary ammonium compound, which adheres to the cellular wall of any harmful bacteria including E.coli and Staph aureus when the product is applied. The active ingredient in the product dehydrates the bacterial cell structures and deactivates their metabolic functions thus killing them.

Kill Rate -

Staph aureus and E. coli

Independent tests show a 99.999% bacterial kill rate ecoli and s. aureus after application, meeting the Australian TGA standard test for a disinfectant.

INGREDIENT:

Water, Glycerin, Sorbitol, Quaternary Ammonium Compound (Benzalkonium Chloride), Propylene Glycol, Lavender Fragrance, Polyacrylic Acid.

AVAILABLE SIZE:

5L, 60 ml & 30 ml
